

ABD-4120 VOLTMETER ADAPTER KIT – ADP-02

The ADP-02 Voltmeter Adapter Kit will convert the Electro ABD-4120 remote control to a voltmeter for monitoring the battery voltage and charging voltage. Connect the red wire from the adapter box to the positive terminal of your battery charger (or battery) and the black wire from the adapter box to the negative terminal of your battery charger (or battery). Connect the cable from the ABD-4120 that was connected to the remote control socket on the Electro charger to the socket on the adapter box.

On the ABD-4120, select BATT. 1 on the Battery Select switch. The LCD Light On switch can also be used to illuminate the display at night.

Please note: This kit will not control the charger output or show the charger status. It is only for displaying the battery voltage and the charging voltage while charging.

The adapter kit uses a 3 Amp 3AG glass fuse.
